AMOS SS21 Project 2 Context Map

Instructions

The project report will be published on our blog. It should be short and sweet, focussed on what you achieved.

“I did not have time to write a short letter, so I wrote a long letter instead.” Attributed to Mark Twain

Being concise is hard work and takes time. Please write as professional a text as you can. Use formal language and correct grammar.

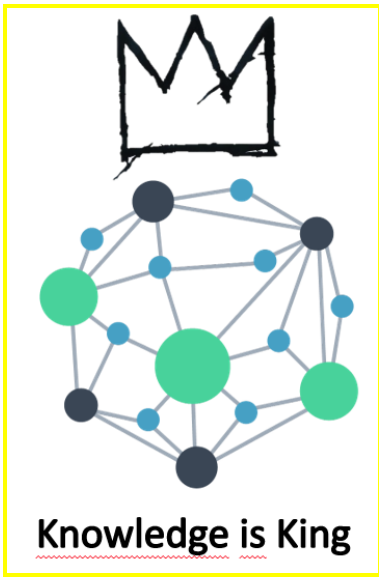

For illustrations please use a persona rather than “test X” or “testperson12”.

Prior examples (not necessarily following our instructions, sadly), can be found here:

<https://osr.cs.fau.de/category/teaching/specific/amos/amos-projects/>

Template

Please use the following template for creating your project report.

Project name	Context Map (KMAP)
Project mission	The mission of this project is to create an MVP for KMAP. Core functionality will be integrating graph data bases, visualizing the graph data in a modular dashboard, and exploring the data with a no-code query builder.
Industry partner	CPU 24/7
Team logo	
Project summary	<p>The core functionality of KMAP is to integrate graph databases, visualize the graph data in a modular dashboard, and explore the data with a no-code query builder. It is suitable for companies of any sector used by the employees searching for insights about their own or related industries. The no-code solution facilitates business users with no programming experience to query the company's modular graph database. KMAP's visualizations can be directly used for management reporting. An outstanding feature of KMAP is its possibility to quickly swap between graph databases.</p> <p>After collaboratively connecting the database together with KMAP's customer support, the software is ready to use. All functionalities can be reached through the</p>

	<p>graphical user interface.</p> <p>For more information check out the user documentation to be found in the github repository's wiki.</p>
